Milestone 3

We are using mySQL connected to a Microsoft Azure server

Our projects database consists of users, posts, comments, votes, schools, and classes that are each stored in their own tables. The tables that need to connect to one another store the id of the corresponding table id that it needs to connect to.

The files used to create and populate the database are create.sql and populate.sql

create.sql
https://github.com/ChristianNHill/Group_Fifty_Fun/blob/master/create.sql

populate.sql
https://github.com/ChristianNHill/Group_Fifty_Fun/blob/master/populate.sql
